### FEATURES

- -55°C to +125°C operation
- 50 dB minimum attenuation at 500 kHz
- Compliant to MIL-STD-461C, CE03
- Compatible with MIL-STD-704E
- DC power bus

### FMH EMI FILTER 1.5 AMP

MODEL				
FMH-461	1.5 amp			

Size (max.): Non-flanged, case E3 1.460 x 1.130 x 0.330 (37.08 x 28.70 x 8.38 mm) Flanged, case G3 2.005 x 1.130 x 0.330 inches (50.93 x 28.70 x 8.38 mm) See Section B8, cases E3 and G3, for dimensions. Weight: 22 grams typical, 28 grams maximum Screening: Standard, ES, or 883 (Class H). See Section C2 for screening options, see Section A5 for ordering information.

### DESCRIPTION

Interpoint specifically designed the FMH-461<sup>™</sup> EMI filter to reduce the input line reflected ripple current of the following high frequency DC/DC converters: MHD, MHF, MHF+, MHV, MSA<sup>1</sup>, and MTR series converters. It will also reduce EMI for several of Interpoint's lower frequency converters: MHE/MLP, MHL, MTO, and MTW series. The FMH-461 filter is ideal for use in applications which must meet MIL-STD-461C levels of conducted and radiated emissions. Throughput current is 1.5 amps. At 16 VDC input (low line), the filter provides 24 watts of throughput power.

#### **MIL-STD NOISE MANAGEMENT**

When used in conjunction with Interpoint converters, the FMH-461 EMI filter reduces input ripple current by 35 dB or greater at 200 kHz and by at least 50 dB at 500 kHz (see Figures 5 and 6 and electrical characteristics table). This attenuation gives the converter/filter combination performance which exceeds MIL-STD-461C's CE03 test.

#### FILTER OPERATION

FMH-461 filters are rated for full power operation from -55°C to +125°C baseplate temperature. Operation is offered up to the absolute maximum of +135°C with derating as defined in "Recommended Operating Conditions" on the following page. The maximum DC insertion loss at full load and nominal input voltage (28 VDC) represents a power loss of less than 2%.

#### LAYOUT REQUIREMENTS

The case of the filter must be connected to the case of the converter through a low impedance connection to minimize EMI.

1. MSA models may require an inductor in series with the MSA's positive input. 2  $\mu H$  is the suggested value.
