

# CMOS OCTAL BUS TRANSCEIVER WITH ADJUSTABLE OUTPUT VOLTAGE, 3-STATE OUT-PUTS, 5 VOLT TOLERANT I/O

# IDT74LVCC3245A

### FEATURES:

- 0.5 MICRON CMOS Technology
- VCCA = 2.3V to 3.6V
- VCCB = 3V to 5.5V
- CMOS power levels (0.4µ W typ. static)
- Rail-to-rail output swing for increased noise margin
- All inputs, outputs, and I/O are 5V tolerant
- Supports hot insertion
- · Available in SOIC, SSOP, QSOP, and TSSOP packages

## DRIVE FEATURES:

- High Output Drivers: ±24mA
- · Reduced system switching noise

## **APPLICATIONS:**

- 5V and 3.3V mixed voltage systems
- · Data communication and telecommunication systems

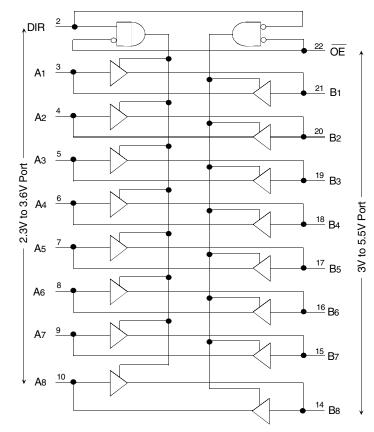

# FUNCTIONAL BLOCK DIAGRAM

## DESCRIPTION:

The LVCC3245A is manufactured using advanced dual metal CMOS technology. This 8-bit (octal) noninverting bus transceiver contains two separate supply rails. The B port is designed to track VccB, which accepts voltages from 3V to 5.5V, and the A port is designed to track VccA, which operates at 2.3V to 3.6V. This allows for translation from a 3.3V to a 5V system environment and vice-versa, or from a 2.5V to a 3.3V system environment, and vice-versa.

This LVCC3245A is ideal for asynchronous communication between two data buses (A and B). The device transmits data from A to B or from B to A, depending on the logic level at the direction-control (DIR) input. The output-enable  $(\overline{OE})$  input can be used to disable the device so the buses are effectively isolated.

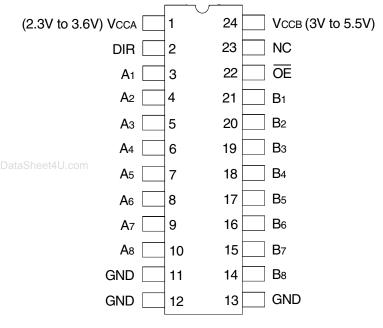

The LVCC3245A has been designed with a  $\pm$ 24mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The IDT logo is a registered trademark of Integrated Device Technology, Inc.

## ABSOLUTE MAXIMUM RATINGS FOR VCCB OR VCCB<sup>(1)</sup>

| Symbol     | Description                                   | Max         | Unit |
|------------|---|-------------|------|
| VTERM      | Terminal Voltage with Respect to GND          | -0.5 to +6  | V    |
| Tstg       | Storage Temperature                           | -65 to +150 | °C   |
| Ιουτ       | DC Output Current                             | -50 to +50  | mA   |
| Ік<br>Іок  | Continuous Clamp Current,<br>VI < 0 or Vo < 0 | -50         | mA   |
| lcc<br>Iss | Continuous Current through each<br>Vcc or GND | ±100        | mA   |

NOTE:

 Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

### CAPACITANCE (TA = +25°C, F = 1.0MHz)

| Symbol | Parameter <sup>(1)</sup> Conditions |          | Тур. | Unit |  |
|--------|-------------------------------------|----------|------|------|--|
| CIN    | Input Capacitance                   | VIN = 0V | 4.5  | pF   |  |
| Ci/o   | I/O Port Capacitance                | Vin = 0V | 11   | pF   |  |

NOTE:

1. As applicable to the device type.

### **PIN DESCRIPTION**

NOTE:

1. See TEST CIRCUITS AND WAVEFORMS. TA =  $-40^{\circ}$ C to  $+85^{\circ}$ C.

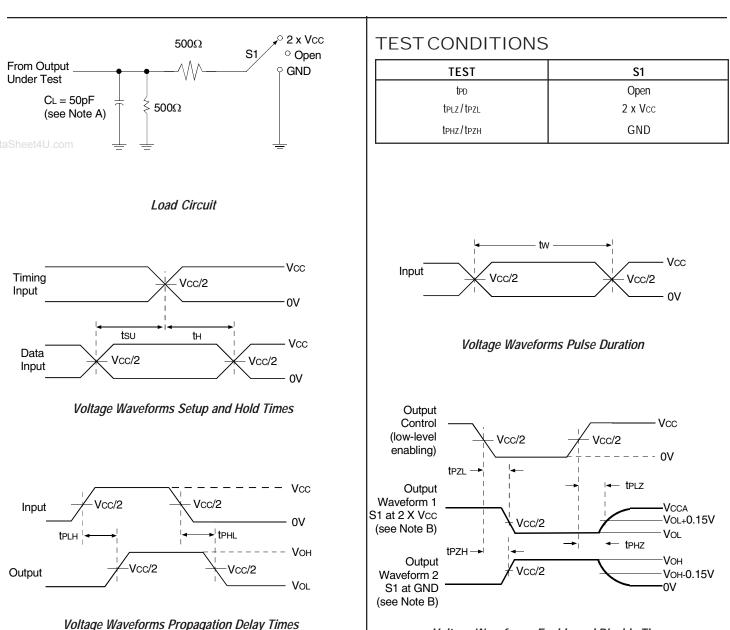

## LOAD CIRCUIT AND VOLTAGE WAVEFORMS PARAMETER MEASUREMENT INFORMATION (A PORT)

 $V_{CCA} = 2.5V \pm 0.2V$  and  $V_{CCB} = 3.3V \pm 0.3V$ 

- A. CL includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is LOW except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is HIGH except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10MHz; Zo = 50 $\Omega$ ; tr  $\leq$  2ns; tr  $\leq$  2ns.
- D. The outputs are measured one at a time with one transition per measurement.

## LOAD CIRCUIT AND VOLTAGE WAVEFORMS PARAMETER MEASUREMENT INFORMATION (B PORT)

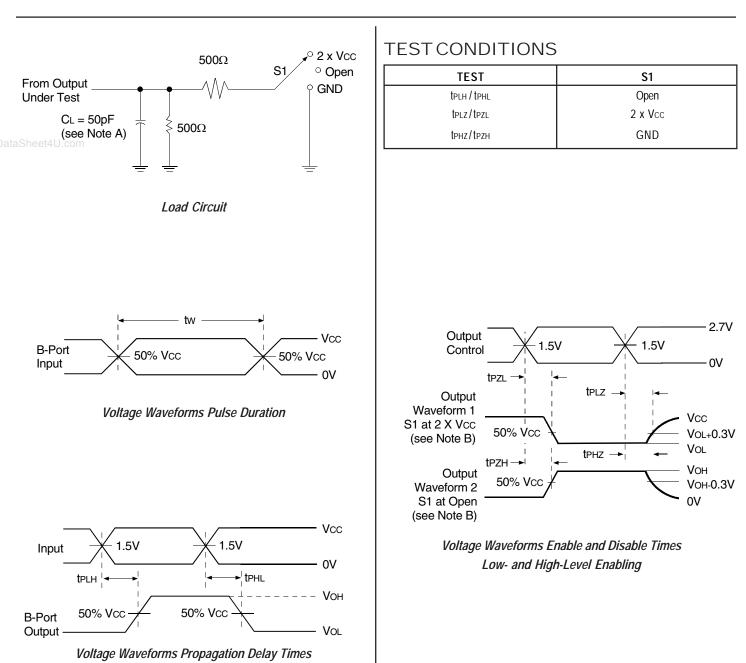

Voltage Waveforms Enable and Disable Times

 $V_{CCA} = 2.5V \pm 0.2V$  and  $V_{CCB} = 3.3V \pm 0.3V$ 

- A. CL includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is LOW except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is HIGH except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10MHz; Zo = 50 $\Omega$ ; tF  $\leq$  2ns; tR  $\leq$  2ns.
- D. The outputs are measured one at a time with one transition per measurement.

## LOAD CIRCUIT AND VOLTAGE WAVEFORMS PARAMETER MEASUREMENT INFORMATION (A PORT)

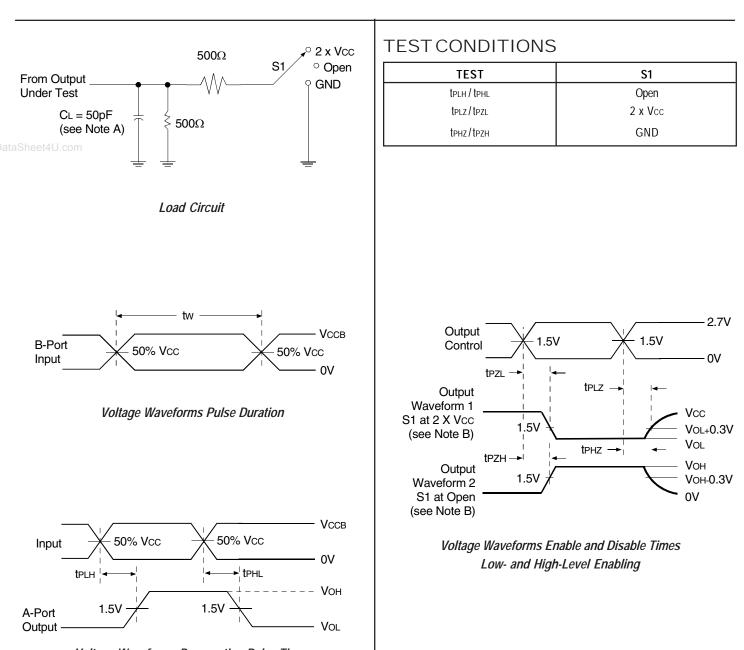

VCCA = 3.6V and VCCB = 5.5V

#### NOTES:

- A. CL includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is LOW except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is HIGH except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10MHz; Zo = 50 $\Omega$ ; tr  $\leq$  2.5ns; tr  $\leq$  2.5ns;
- D. The outputs are measured one at a time with one transition per measurement.

Noninverting Outputs

## LOAD CIRCUIT AND VOLTAGE WAVEFORMS PARAMETER MEASUREMENT INFORMATION (B PORT)

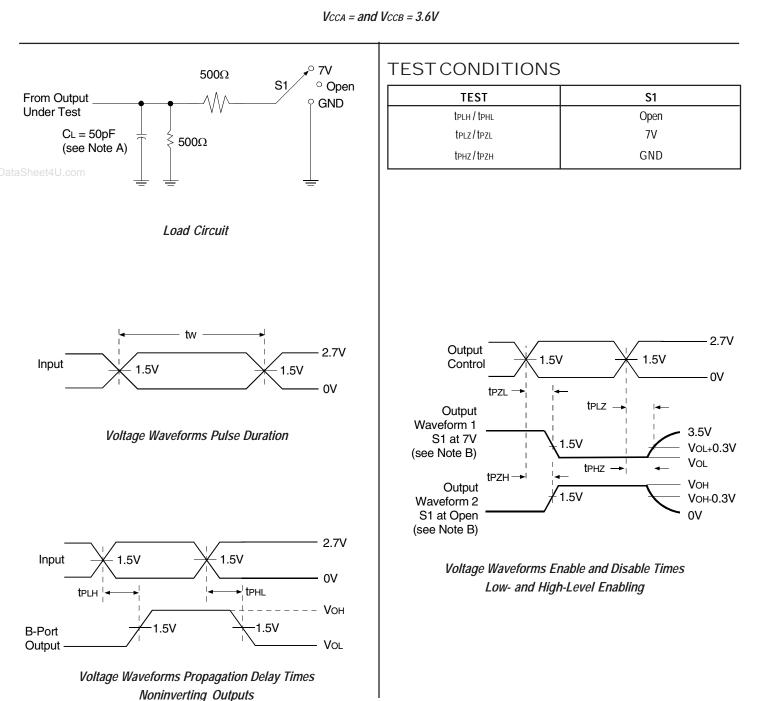

VCCA = 3.6V and VCCB = 5.5V

Voltage Waveforms Propagation Delay Times Noninverting Outputs

- A. CL includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is LOW except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is HIGH except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10MHz; Zo = 50 $\Omega$ ; tr  $\leq$  2.5ns; tr  $\leq$  2.5ns.
- D. The outputs are measured one at a time with one transition per measurement.
