

HT6220A/HT6221A/HT6222A

Multi-Purpose Encoders

Features

- Operating voltage: 2.0V~3.6V
- DOUT with 38kHz carrier for IR medium
- Low standby current
- Minimum transmission word: one word
- Build-in RC (Internal RC) oscillator
- 16-bit address codes
- 8-bit data codes
- PPM code method
- Three double-active keys
- Maximum active keys
 - HT6220A: 30 keys
 - HT6221A: 32 keys
 - HT6222A: 64 keys
- Low power and high noise immunity CMOS technology
- HT6220A: 16-pin NSOP package
HT6221A: 20-pin SOP package
HT6222A: 24-pin SOP package

Applications

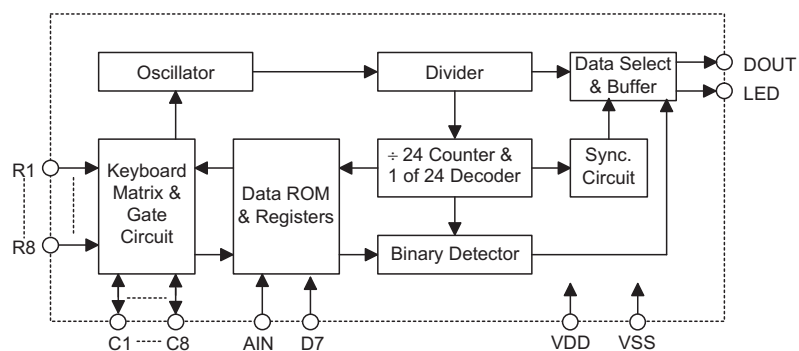

- Television , setup box and DVD player controllers
- Burglar alarm systems
- Smoke and fire alarm systems
- Garage door controllers
- Car door controllers
- Car alarm systems
- Security systems
- Other remote control systems

General Description

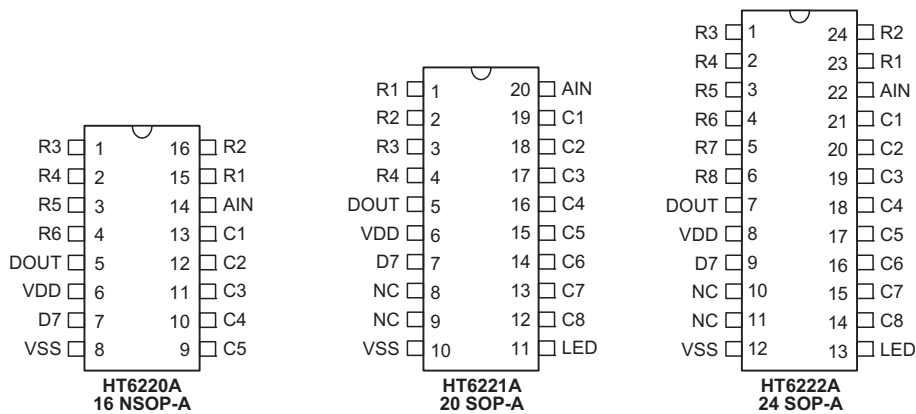

The devices are CMOS LSI encoders designed for use in remote control systems. They are capable of encoding 16-bit address codes and 8-bit data codes. Each address/data input can be set to one of the two logic states, 0 and 1.

The HT6220A/HT6221A/HT6222A contain 30keys (K1~K16, K17~K20, K33~K34, K37~K38, K41~K42, K45~K46, K49~K50), 32 keys (K1~K32) and 64 keys (K1~K64), respectively. When one of the keys is triggered, the programmed address/data is transmitted together with the header bits via an IR (38kHz carrier) transmission medium.

Pin Assignment

Pin Description
HT6222A

Pin No.	Pin Name	I/O	Internal Connection	Description
1~6	R3~R8	I	CMOS IN, Pull-low	Row control for keyboard matrix, active high
7	DOUT	O	NMOS OUT	Serial data output pin, with a 38kHz carrier
8	VDD	—	—	Positive power supply, 2.0V~3.6V for normal operation
9	D7	I	CMOS IN	Most significant data bit (D7) code setting
10, 11	NC	—	—	No connection
12	VSS	—	—	Negative power supply, ground
13	LED	O	CMOS OUT	Transmission enable indicator output
14~21	C8~C1	I/O	CMOS IN/OUT, Pull-low	Column control for keyboard matrix
22	AIN	I	CMOS IN, Pull-high Pull-low	Low byte address codes (8 bits) scan input
23~24	R1~R2	I	CMOS IN, Pull-low	Row control for keyboard matrix, active high

Approximate Internal Connection Circuits

Absolute Maximum Ratings

Supply Voltage	$V_{SS}-0.3V$ to $V_{SS}+6V$	Storage Temperature	$-50^{\circ}C$ to $125^{\circ}C$
Input Voltage	$V_{SS}-0.3V$ to $V_{DD}+0.3V$	Operating Temperature	$-20^{\circ}C$ to $75^{\circ}C$

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

Electrical Characteristic

Ta=25°C

Symbol	Parameter	Test Conditions		Min.	Typ.	Max.	Unit
		V _{DD}	Conditions

R _{PL3}	Input Pull-low Resistance for C1~C8	3V	V _{IN} =3V	300	500	1500	kΩ
f _{OSC}	System Frequency	3V	Ta=25°C	450.45	455	459.55	kHz
		2.0V~3.6V	0°C < Ta < 70°C	445.90	455	464.10	kHz

Note: f_{OSC} specification is guaranteed by design under 0°C < Ta < 70°C and not subject to production testing.

Functional Description

Keyboard Scan

The devices remain in the halt mode during the standby state (at this time, the oscillator stops, and the standby current <math><1\mu A</math>). The HT6220A consists of 30 active keys, HT6221A has 32 active keys, and the HT6222A has 64 active keys. The keyboard forms of the devices are shown below.

- The HT6220A keyboard form

- The HT6221A keyboard form

- The HT6222A keyboard form

When one of the keys (30, 32 or 64 keys) is triggered for over 36ms, the oscillator is enabled and the chip is activated. If the key is pressed and held for 108ms or less, the 108ms transmission codes are enabled and comprised of a header code (9ms), an off code (4.5ms), low byte address codes (9ms~18ms), high byte address codes (9ms~18ms), 8-bit data codes (9ms~18ms), and the inverse codes of the 8-bit data codes (18ms~9ms). After the pressed key is held for 108ms, if the key is still held down, the transmission codes turn out to be a composition of header (9ms) and off codes (2.24ms) only.

To avoid mistakes made by keyboard scanning or simultaneous two-key inputs (except for the three double-key active functions (K21+K22, K21+K23, and K21+K24), the devices are facilitated with 36ms starting time.

The HT6221A/HT6222A also provide three double-key active functions (K21+K22, K21+K23, and K21+K24) for tape deck recording operations. The double-key operation rules are shown in timing 4 and timing 6.

Transmission Codes

The transmission codes of the devices consist of a 9ms header code, a 4.5ms off code, 16-bit address codes (18ms~36ms), 9ms~18ms 8-bit data codes, and the inverse code of the 8-bit data codes. The following is an illustration of the transmission codes.

Timing 1. Output Format for the DOOUT

The output code carrier of the DOUT pin is shown in Timing 2.

Timing 2. 38kHz Carrier

The transmission codes employ the PPM (Pulse Position Modulation) method to represent their two logic states by "0" (1.12ms) and "1" (2.24ms) as shown in Timing 3.

Timing 3. Logic States

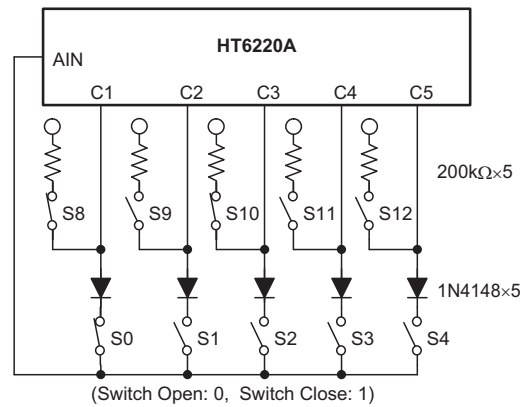

• Setting the address codes (A0~A15)

The algorithm rule of the address codes (A0~A15) can be selected by mask option. In this case, the 16-bit on-chip MASK ROM (ROM1 and ROM2) are available, and the value of ROM1 (8 bits) and ROM2 (8 bits) are decided by one MASK LAYER. The current value of ROM1 and ROM2 are both "00H". The A0~A7 are set by logical OR between

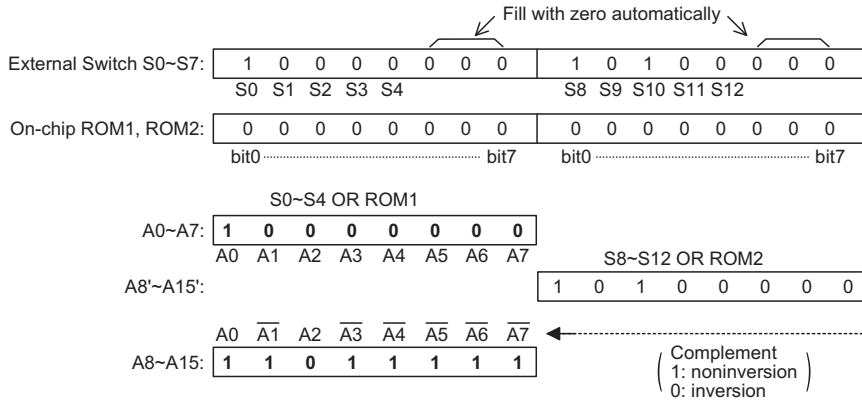

the external switch S0~S7 and the ROM1. The A8~A15 equal some bits inverted to A0~A7, the inversion are decided by Logical OR between the external switch S8~S15 and the ROM2.

For example:

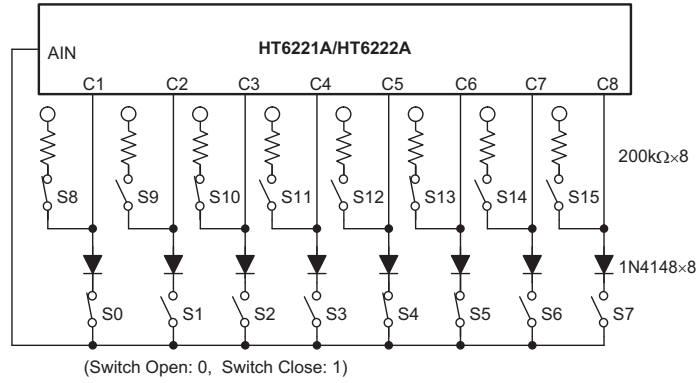

The following is an illustration of these rules in selecting the address codes (A0~A15).

(Switch Open: 0, Switch Close: 1)

HT6220A/HT6221A/HT6222A

External Switch S0~S15:

1	0	0	0	1	1	0	0	1	0	1	0	0	1	0	0
S0	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12	S13	S14	S15

On-chip ROM1, ROM2:

0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
bit0 bit7								bit0 bit7							

S0~S7 OR ROM1

A0~A7:	1	0	0	0	1	1	0	0
A0	A1	A2	A3	A4	A5	A6	A7

1	1	0	1	0	1	1	1

← (Complement
1: noninversion
0: inversion)

HT6220A/HT6221A/HT6222A

- Values of the data codes (D0~D7)

The HT6220A/HT6221A/HT6222A contain 30, 32 and 64 active keys, respectively. Each key corresponds to a data code. For tape deck recording, the HT6221A/HT6222A provide three double-key functions. The double-key, single-key, and double-key operation rules are shown in Table 3, Table 4, Timing 4, Timing 5 and Timing 6.

Table 3: Double-key data code table

KEY	Data Codes D0~D6	Data Code D7
K21 + K22	1010110	0/1
K21 + K23	0110110	0/1
K21 + K24	1110110	0/1

Note: D7 is defined by an external switch

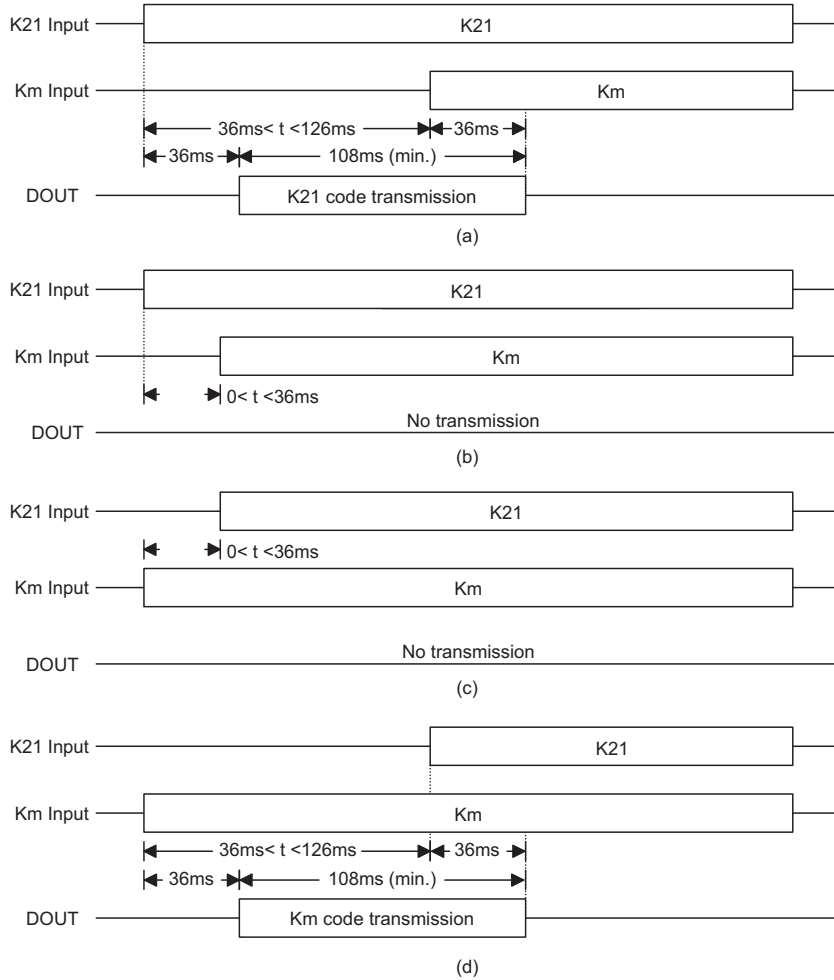

Table 4: K1~K64 single-key data code table

K28	1101 100	0/1	K60	1101 101	0/1
K29	0011 100	0/1	K61	0011 101	0/1
K30	1011 100	0/1	K62	1011 101	0/1
K31	0111 100	0/1	K63	0111 101	0/1
K32	1111 100	0/1	K64	1111 101	0/1

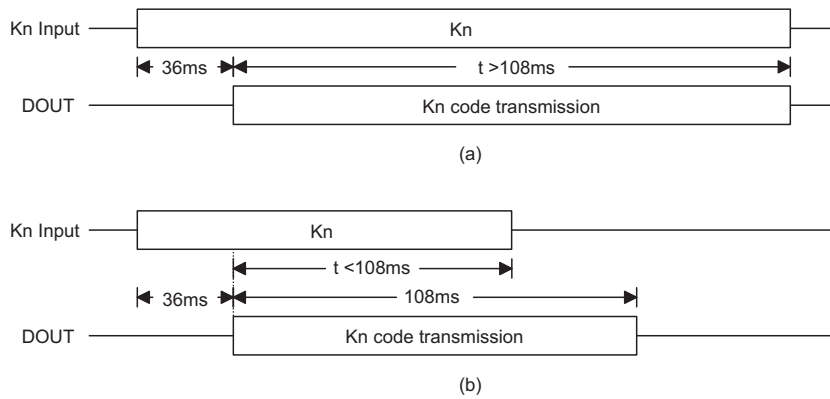

Note: D7 is defined by an external switch

D7=0 : connect to VDD

D7=1 : connect to VSS

Timing 4. Invalid Double-Key Input

Note: Kn can be one of K1~K64

Timing 5. Valid Single-Key Input

Note: Km can be one of K22~K24

Timing 6. Valid Double-Key Input

DOUT and IR LED

After the transmission codes are sent, the DOUT pin generates transmission codes with a carrier, and the IR-LED goes low to drive a transmission indicator. The DOUT pin abbreviate exterior transistor, to provide large current driving ability.

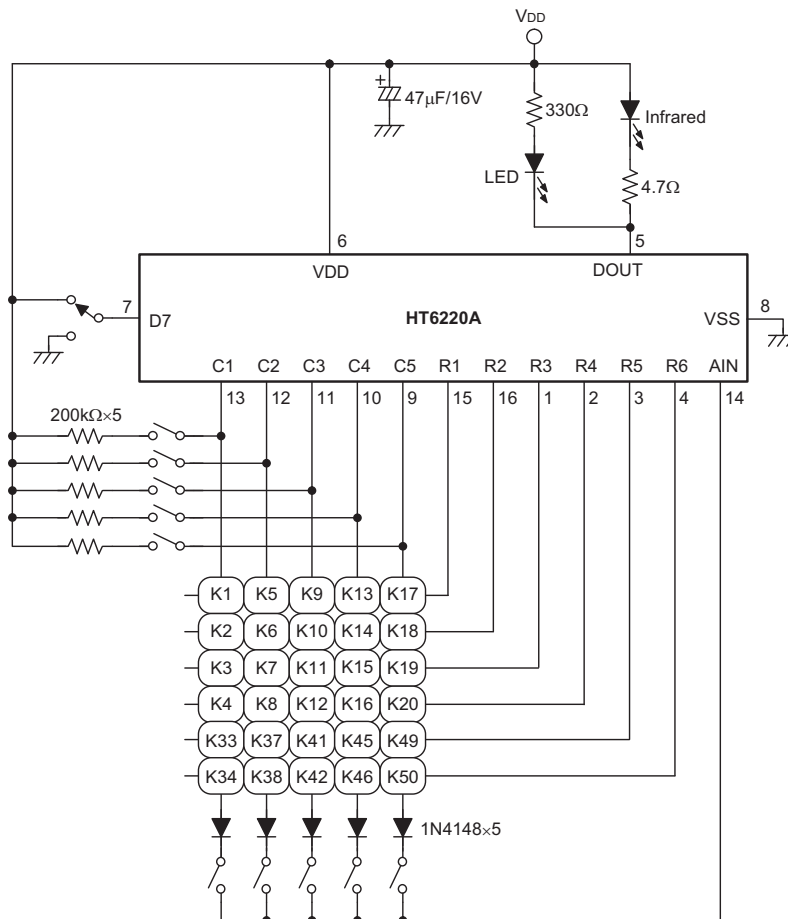

IRC

The frequency of the internal RC(IRC) oscillator is depending on the temperature and operating voltage.

At Ta=25°C at 3.0V, the IRC has an accuracy of ±1 per cent. In the range of 0°C to 70°C at 2.0V~3.6V, the accuracy value of the RC frequency increases to the maximum value of ±2 per cent.
