### 13PD300-TO

The 35PD300-TO, an InGaAs photodiode with a 300 $\mu$ m-diameter photosensitive region packaged in a TO-46 header. This device is one of Telcom Devices' most versatile optoelectronic components, with applications in high sensitivity instrumentation, laser back-facet monitoring, and moderate-bit-rate telecomm and datacomm transmission.. Planar semiconductor design and dielectric passivation provide superior noise performance. Reliability is assured by hermetic sealing and 100% purge burn-in (200°C, 15 hours, Vr = 20V). Headers are available with either a lensed or flat window cap. Chips can also be attached and wire bonded to customer-supplied or other specified packages.
