

## **Internally Matched LNA Module**

#### **Features**

- · S<sub>21</sub> = 25.6 dB @ 1920 MHz = 24.4 dB @ 2170 MHz
- · NF of 0.85 dB over Frequency
- · Unconditionally Stable
- · Single 5V Supply
- · High OIP3 @ Low Current

#### **Description**

The plerow™ ALN-series is the compactly designed surface-mount module for the use of the LNA with or without the following gain blocks in the infrastructure equipment of the mobile wireless (CDMA, GSM, PCS, PHS, WCDMA, DMB, WLAN, WiBro, WiMAX), GPS, satellite communication terminals, CATV and so on. It has an exceptional performance of low noise figure, high gain, high OIP3, and low bias current. The stability factor is always kept more than unity over the application band in order to ensure its unconditionally stable implementation to the application system environment. The surface-mount module package including the completed matching circuit and other components necessary just in case allows very simple and convenient implementation onto the system board in mass production level.

2-stage Single Type

# **Specifications (in Production)**

Typ. @ T = 25°C,  $V_s$  = 5 V, Freq. = 2045 MHz,  $Z_{o.sys}$  = 50 ohm

Parameter	Unit	Specifications		
		Min	Тур	Max
Frequency Range	MHz	1920		2170
Gain	dB	24	25	
Gain Flatness	dB		± 0.6	± 0.7
Noise Figure	dB		0.9	0.95
Output IP3 (1)	dBm	34	35	
S11 / S22 <sup>(2)</sup>	dB			-18 / -10
Output P1dB	dBm	19	20	
Switching Time (3)	μsec		-	
Supply Current	mA		90	110
Supply Voltage	V	5		
Impedance	Ω	50		
Max. RF Input Power	dBm	C.W 23 ~ 25 (before fail)		
Package Type & Size	mm	Surface Mount Type, 13Wx13Lx3.8H

Tel: (82) 42-528-7223 Fax: (82) 42-528-7222

ASB Inc., 4th Fl. Venture Town Bldg., 367-17 Goijeong-Dong, Seo-Gu, Daejon 302-716, Korea

Operating temperature is -40°C to +85°C.

## **Outline Drawing (Unit: mm)**

Pin Number	Function	
3	RF In	
8	RF Out	
10	+Vcc	
Others	Ground	

Note: 1. The number and size of ground via holes in a circuit board is critical for thermal RF grounding considerations.

2. We recommend that the ground via holes be

placed on the bottom of all ground pins for better RF and thermal performance, as shown in the drawing at the left side.

<sup>1)</sup> OIP3 is measured with two tones at an output power of 4 dBm / tone separated by 1 MHz.
2) S11/S22 (max) is the worst value within the frequency band.
3) Switching time means the time that takes for output power to get stabilized to its final level after switching DC voltage from 0 V to V<sub>S</sub>.

## **Internally Matched LNA Module**

### S-parameters & K Factor

### **Noise Figure**

OIP3

P1dB

### **Application Circuit**

- 1) The tantal capacitor is optional and for bypassing the AC noise introduced from the DC supply. The capacitance value may be determined by customer's DC supply status.
- 2) So-called DC blocking capacitors are always necessarily placed at the input and output port for allowing only the RF signal to pass and blocking the DC component in the signal. The DC blocking capacitors are included inside the LNA module. Therefore, C1 & C2 capacitors may not be necessary, but can be added just in case that the customer wants. The value of C1 & C2 is determined by considering the application frequency.

### **Recommended Soldering Reflow Process**

### **Evaluation Board Layout**

Size 25 x 25mm (for ALN Series – 13x13mm)
