USB 2.0 Common Mode Filter – 1206

These Coilcraft filters are designed to eliminate virtually all common mode noise in high-speed, differential mode signal transmission applications such as USB 2.0, IEEE1394 and LVDS. Most provide greater than 30 dB common mode attenuation and greater than 100 ohms impedance.

These dual-wound filters have an industry standard footprint and feature lower DC resistance and greater current handling capability than our 0805USB filter. They are available in nine values to meet your specific requirements.

Coilcraft **Designer's Kit C384** contains samples of all values shown here plus all values in our 0603USB and 0805USB series. To order, contact Coilcraft or purchase online at <http://order.coilcraft.com>.
