* Mounting Configuration Notes

- 1. Ground / thermal via holes are critical for the proper performance of this device.
- 2. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
- 3. Mounting screws can be added near the part to fasten the board to a heatsink. Ensure that the ground / thermal via hole region contacts the heatsink.
- 4. Do not put solder mask on the backside of the PCB in the region where the board contacts the heatsink.
- 5. RF trace width depends upon the PCB material and construction.
- 6. Use 1 oz. Copper minimum.
