

- Ideal for 434.42 MHz Transmitters
- Very Low Insertion Loss
- Quartz Stability
- Ultra Miniature Ceramic SMD Package (QCC4A)

SR5519

Note:

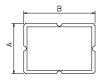

- The frequency f_c is the frequency of minimum IL with the resonator in the specified test fixture in a 50Ω test system with VSWR ≤ 1.2:1.
- 2. Unless noted otherwise, case temperature TC = +25°C±2°C.
- 3. Frequency aging is the change in fC with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature, T0, is the temperature of maximum (or turnover) frequency, f0. The nominal frequency at any case temperature, TC, may be calculated from: f = f_o [1 - FTC (T_O - T_C)²].
- 5. This equivalent RLC model approximates resonator performance vww. Dnear the resonant frequency and is provided for reference only. The capacitance C₀ is the measured static (nonmotional) capacitance between input terminal and ground or output terminal and ground.

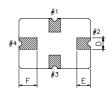

- The measurement includes case parasitic capacitance.
- Derived mathematically from one or more of the following directly measured parameters: f_c, IL, 3 dB bandwidth, f_C versus T_C, and Co.
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
